21	22 The ASNARO 2 radar Earth observation satellite is launched from Japan's Uchinoura Space Center	23 1st Quarter Moon	24	25	26	27
28	29	30	31 			

Mars and Jupiter will be visibly close to each other this weekend in the morning sky. You should be able to see them very well with a backyard telescope or binoculars very early in the morning.

New Moon!
Take advantage of the lack of moonlight to see other celestial objects

Rocket Return!
The SpaceX Dragon CRS-13 cargo spacecraft takes off from the International Space Station and returns to Earth

Full Moon and Total Lunar Eclipse!
A Lunar Eclipse is visible at dawn in North America, when the Earth's shadow falls on the Full Moon. And there is a Blue Moon at night -- that's the second Full Moon in any single month. This is also the last Supermoon of 2018.

NASA celebrates its 60th anniversary this year!

Space Racers airs Mon-Sun at 2:30pm on Sprout
